

Langley. 1636.

A New Almanack and Prognostication, for the yeere
of our Lord God,

And from the creation. 5598
Being Bissextill or Leap yeere.

Composed for the use of the
of the ancient and famous
towne of Shrewsbury, &
generally for al great Britain

By Thomas Langley.

London Printed by T.C. for the
Company of Stationers.

The Common notes and moveable feasts,
for this present yeere of grace.

1636.

According to the
old accompt used
here in England.

The new Gregori-
an accompt used be-
yond Sea.

To the Courteous not Capricious readers or buyers
of our Annuall Almanacke.

*Accept my first of being Blanke,
and for the same Ile give you thanke
Few dayes respite to me was given,
which made me blanke to make alleven :
The next God willing mend shall be,
if I please you, you do please me.*

Tho. Langley.

C. 175. 2. 15.

The vse of the former Tables.

Would you know what interest is due vpon any summe of money at any time desired by these tables, First seeke the summe on the sides of the Tables and the time on the head of the tables, and in the angles of place meeting you shall haue the summe desired in pounds shillings and pence and parts of pence as the titles aboue shew, And note that 25 of them parts of pence make a penny.

I am desirous to know what interest is due vpon five pounds for ten moneths, therefore I seeke for 5 on the left hand of the first table where it is titled with pounds, And from that 5 I guide my eye in a right line vntill I come vnder 10 the number of moneths, and in that place of meeting is 6 shillings 8 pence which is the just summe due for 5 pounds for 10 moneths.

But if I would know what interest is due vpon 15 pound for 10 moneths, then I seeke on the side of the table for 10 pounds and see what interest is due vpon ten pounds which in this table is found to be 13 shillings 4 pence (which being added together with the foresaid 6 shilling 8 pence) the full summe will be 20 shillings the full interest due vpon 15 pounds for 10 moneths.

Againe I would know what interest is due vpon 17 shillings for 8 moneths, and therefore I seeke in the table 10 and 7 against shillings and vnder 8 months against 10 is 6 pence and 10 parts of a penny Also against 7 is 4 pence and 12 parts of a penny, adde these two summes together and you shall finde the product to bee 10 pence and 22 parts of a pennie wherevpon I conclude that the interest due for 17 shillings lent in 8 months is almost 11 pence.

Thus may you doe by any other summes as if the sum were 56 pounds, see by the table what is due vpon fifty your time desired, and what is due vpon 6 pounds, And adde these two summes together and you haue your desire.

The names of the dayes of the weeke
according as they are commonly called
by the

<i>Hebrews,</i>	<i>Latines,</i>	<i>English.</i>
1 Feria prima.	1 Dies Solis.	1 Sunday.
2 Feria secunda.	2 Dies Lune.	2 Monday.
3 Feria tertia.	3 Dies Martis.	3 Tuesday.
4 Feria quarta.	4 Dies Mercurij.	4 Wednesday.
5 Feria quinta.	5 Dies Iovis.	5 Thursday.
6 Feria sexta.	6 Dies Veneris.	6 Friday.
7 Feria septima.	7 Dies Saturni.	7 Saturday.

The 4 Ember or Fasting dayes.

Wednesday the 9	Friday the 11	Saturday 1 in March
Wednesday the 8	Friday the 10	Saturday 12 in Iune
Wednesday 21	Friday the 23	Saturday 24 in Sept.
Wednesday 14	Friday the 16	Saturday 17 in Decē

No marriage without a Licence

From the 29 of November 1635, vnto the 11 of Iannary 1636.

From Septuagesima Sunday vntill the 25 of Aprill.

From the 23 of May vntill the 20 of Iune.

Note that 60 minutes make an houre.

30 minutes make halfe an houre.

15 minutes make a quarter of an houre.

Of the yeere in generall.

The Italian yeere beginneth the first of January
The Gregorian yeere beginneth the 12 of December
The Church of England in Law cases, March 25
The yeere of his Majesties reigne. March 27
The state of Florence and Pisa, March 25
The Empire of Italian account, the 1 of January
The Church of Rome, on the 25 of December
The Egyptians and Persians, the 18 of our July
The Arabians and most people of Asia, September 12
The Hebrewes, Grekes, Saracens, Turkes.
The Tropickall or true solar yeere beginneth when the
Sunne is at the Verticall equinox, and containeth 365
5 houres, 50 minutes.
The Sidericall yeere beginneth when the sunne is with
the first starre of Aries containing 365 dayes, 6 houres,
and 6 minutes.

A Month.

Solar is the continuance of the Sunne in one signe.

Of Apparition is 28 daies or 4 weekes.

Of Paragression is 27 daies and 8 houres.

Of Consecution is from new moone to new moone.

And for use of money according to the Bailender.

A Week.

Hath the name in Latteen Septimana or 7 mornings though
commonly we terme it 7 night, or short scennight.

A Day.

Artificiall is the time betwæne sunne rising, and sunne
setting and the night from sunne set to sunne rising.

A day naturall is the time of 24 houres, the beginning
whercof is with us here in England, & the Romans at
midnight.

The Athenians at sunne setting; the Babilonians at
sunne rising; the Umbrians & Astronomers at noone.

The Anatomie of Mans Body, as the
parts thereof are governed by
the twelve Signes.

~~upon Count-fo~~

February hath xxix. dayes.

The time is not so weake as we are now,
The Agues shake, but yet the poore must bow :
The feaver whipperh some, as with a rod,
But some are scourg'd, not by the hand of God.

March hath xxxj. dayes.

The time is good to purge, to bathe, to bleede,
Yet good advise will stand thee much in steed:
Some run so fast, that out of all they goe,
And hasty braines are seldome wanting woe.

May hath xxxj. dayes.

Rise earely now this pleasant month of May,
 Frequent the fruitfull fields in their aray;
 I wish you all sinne to shun, such pleasure take,
 And in your Saviour Christ still merry make.

payd out 1000.
20 1030~~

Iune hath xxx. dayes.

In Iune eate coole herbs with your meate,
 Yet take heede of surfeits when you doe eate:
 Some eate the poore as they eate their food,
 Such Cormorants there are of the devils broode.

July hath xxxij dayes.

The heate doth burne, excesse is worse then waste,
Use moderation ever in taking thy repast :
All gurmundizing creatures to their end,
Sicknesse and emptie purses will evermore attend.

28 dayes at mth Hugh
about mth Standley and
Edward Hittors on line

August hath xxxj. dayes.

Evermore in *August* have a special care,
In drinking, eating, sleeping, of excessse beware :
Refuse not then good counsell of a friend,
Obserue this well, serue God vnto the end.

*Can't handle of No Day
24 of Aug 46
fixe winter.*

September hath xxx. dayes

September yeeldes fruits to vs plenteously,
Woods, gardens, fields; looke now most gorgeously:
Regard thy bodys health, thy soule much more,
The learn'd haue taught, and doe teach still this lore.

November hath xxx. dayes

Regard well all thy life time the 5 day of November,
And teach thy children ever the same day to remember
Gods mercie, and Popes crueltie, with one fatall blow
The King & State most wickedly, quite for to overthrow.

December hath xxxj. dayes.

Now Fowlers set their lime twigs birds to take,
Whil' st traps for innocents some people make :
Some now prepare to spend some of their store,
But God the next yeare sends them much the more.

prosper O Lord with all happinesse.

The

The Foure Quarters of the Yeare.

And First of Winter.

The ☉ Sun in ♑ Capricorne, ♊ Aquarius, ♋ Pisces.

Vinter by our Astronomicall Computation beginneth at the entrance of the Sunne into the first minute of Capricorne, which was in the yeare aforegoing on the 12 day of December, and continueth untill he have attained to the latter part of Pisces on the Tenth day of March following. Now hath the Sunne his greatest South declination from the Equinoctiall line, rising South-east, and setting South-west, making the Hyemall or winter Solstice, making with us the shortest day and longest night in the yeare.

The inclination of this quarter is cold and moyst, but the colder and dryer it is, the better and wholsomer, yet the too much cold killeth Trees in a warme Region, especially young and tender. A warme and a moyst winter is very unwholsome and an enemy to husbandmen, but reasonable store of Snow doth make rancke the ground, and preserue the Corne

In this Brumall quarter it is good to eate well, and drinke little, because at this time mans stomacke is of good digestion.

Diseases usually afflicting mens bodies this Quarter, are Hoarsenesse, cold laskes, Rhumes, Coughes, swellings in the Face, by occasion of the Toothache, the Stone, the Gowte, Drop sic, melancholy passions, Agues of sundry sorts, with some other troublesome diseases.

A Prognostication. Of the Spring Quarter.

The ☉ Sun in ♈ *Aries*, ♉ *Taurus*, ♊ *Gemini*.

THe Winter revolution being fully finished, the Sun mounteth and moveth into the first degree of the first Equinoctiall signe *Aries*, at which moment the spring hath its beginning, now is the vernall Equinoctiall, the Sun rising at 6 of the clock in the morning & setting at 6 at night, making the artificial day equall with the night, this quarter ends on the 12 day of *June*.

A moist Spring makes the fruit to rott and weeds to abound: if hott (Roses will be rancke, but not sweet) and all such Flowers will better please the eye then the taste or sence, if cold and dry, then will hoare frosts fall at the end of the quarter, if wett with much South wind, and the former winds dry with Northerne windes, next Summer will be apt to Agues, dropping of the eyes: A dry Spring with much Northerne windes, and a wet winter full of Southerne winds going before, causeth women with children to be delivered before their time, or else bring forth weake children: generally if the quarter vary from its proper nature, the commodities of the earth will be made worse and scarce.

Sicknesses like to rage this quarter, are Small pox, Measels, Squinancies, hot Feavers, obstructions, Jaundie, Pluresies, red spots, Toothache, Fevers of blood, Scabs, paine in the eyes & throat, Kings evill, Ring-wormes, Faintings, Frenzies, Leprosies, Falling-sickness, griefes in Armes and shoulders caused by blood, and such like, as proceed from the corruption thereof.

Of Summer.

The ☉ Sunne in ♋ *Cancer*, ♌ *Leo*, ♍ *Virgo*.

Summer the Mother and nurse of plenty, being the third part of the yere, taketh his beginning when the Sun hath
fully

Langley. 1636!

fully determined the Spring with the last of *Gemini*, and hath moved in his motion to the higheft point of his course, namely to the first scruple of *Cancer*, producing our Estivall or Sommer Solstice. For even as the Sun when he entred into *Capricorne*, had his greatest South declination from the Equinotiall Line, so now at his ingression at the beginning of *Cancer*, he hath his greatest declination towards the North from the said Equinotiall Line: And even then as at the time of winter Solstice, he was so far removed from our verticall point, that he could not move further towards the South, and therefore was to approach towards our North Latitude, at which time he seemed to stand, so now being come so neere our Zenith, that he cannot come neerer to the North, and therefore retutneth towards the South Latitude, making now againe the longest day and shortest night in the yeare, and after declineth more and more from us, as before he moved towards us. If Summer be over we Fruits will putrifie, small store of graine, many sicknesses. If it be onely dry, want of graine, but Summer fruits will be wholesome, Fishes will dye in ponds, great sicknesses like to happen; to conclude, if cold, the yeare will be wholesome, but the Fruit will be rotten.

Mans stomacke now is more weake then before in the winter quarter, and therefore slower of digestion, therefore use such cold and coole meates that do moysten and mitigate the nature of the quarter, which is hot and drye.

The sicknesses subject to this quarter, are griefes and sorowments in the Breasts, Ribs and spleene, pushes in the Face, Leprosie, bleard and sore eyes, with other impediments therein, Plurisies, Cough, heart and stomacke aking, sorrow, vexations, Fevers of blood, Aposthumes, Jaundis, Pestilence and the like, proceeding from melancholy.

Autumne or Harvest.

The ☉ Sunne in ♎ *Libra*, m *Scorpio*, 2 *Sagittarie*.

HArvest the Fourth and last quarter after our usuall computation by nature cold and dry, beginneth on the 13 day

A Prognostication.

of September, the Sun then entring into the first scruple of *Libra*, working the like effect that he did at his going or moving into *Aries*, that is, making the daies and nights of an equall length, for now the Sun riseth at 6. and setteth at 6. and may fitly be called our second Spring, being a fit time to take physicke, let blood, purge, provided with good advice of the learned Physitian, and not of any Quacksalvers, Women Doctors, who kill more then they cure, and therfore to be avoyded. If Autumne be moyst, Grapes will putrifie, and wine, but if in the end be wet, fruits will be scarce the ensuing yeare: If the begining be dry there will be much hurt, if hot, much sicknesse and evils, if cold, losse of harvest, fruits in quantity, Iuyce and beauty.

This quarter because of the inequality of the temperature, may, as *Hippocrates* saith, be called the mother or nurse of deadly sickneses, especially paines in the backe and privy parts, infirmities in the Face, quartaine Agues, humors and Dropsies, Vertigo, Fallingsicknesse, headache, Toothach, surfetings, and dimnesse in the sight, rawnesse in the stomacke, backeache, purse ache, which is like to prove the heartache, and such like, from the which and the like good Lord deliver us.

Rules of good Husbandry for every Moneth.

In January fallow light earths or stiffe Beane earths, cut downe Timber that it may not chinke or Rine; stub by ruffe pastures, and lay smooth your meadowes, digge by your Gardens to prepare the mould, open your hives & trimme them, make bare the roots of trees from the earth, have a carefull eye to your shepfold, for Cotes of the Fallowes are now Caning and in danger.

In February sow your Beanes, and mixed great pulse, cleanse your trees from mosse, and your hedges from Caterpillers, trimme your Fruit trees, lay quicke=sets, plane
Hoses

Langley. 1636.

Roses or what else beareth the prickles, graft Trees, slip branches and set them, and plash and prune quickesets.

In March sow fetches and small pulse Dates and barley, in the beginning plant and graft fruit trees, renew and couer those rootes made bare in Ianuary with fresh Earth, and at the latter end begin to sow barley if the season serue, carry out your manure, now begin your kitchen Garden, sow your early seedes, and remoue the slips of those flowers planted in September, and in October.

In Aprill make an end of your barley seed, sow Hem; e and Flaxe, make your garden perfect, and sow all sorts of Pot hearbes, slip hearbes and set them, set vp your Vines, and plash and prune your fruit trees, it is now good to graft all ourlandish fruit, and to plant & sow strange flowers.

In May sow barley vpon hot sandy ground, plant cokes cumpers, gourds, and mellons, slip your gillyflowers and set them in a bed close and thicke now in Summer stir all such land that you did make fallow in Ianuary, and fallow such lands as was not then to be plowed, now apply your manuring and as the season will serue, bring home fuel, Timber, and Tinsell, and be sure for to make good your Forces.

In Iune Sheare your sheepe, mowe downe your lome Meddowes, plant grafts, or set any hearbe or flower that is tender make an end of Summer stirring, and turne all your manure into the mould, now fold your sheepe, and be sure to make them beate off the deaw with their feet before they begin to feede in the morning.

In Iuly cut downe your high meddowes, replant hearbs you would not haue feed off, begin to soyle your Summer stirring, and stir your latter fallowing, gather flowers and preserue them, looke vpon your Bye, and if the eares begin to hang downeward, sheare it, and by all meanes cleanse your barley from thistle weedes and other annoyances.

A Prognostication.

In August make an end of sowing your Land, gather your plumes and Summer fruite, Heare your Rye and Wheate and Dates, also at the end begin to mowe downe your barley, now geld your Lambs, and make sale and cut downe the wood that you can spare for that Winter.

In September Reape your beanes and pease, slippe all sorts of garden flowers and replant them, at the latter end begin to sow wheate and Rye, and winter rig that fallow land which is for Barley, now breake up all Land for barley next yeare, and manure it, now fold your Sheepe where you meane to sow wheat and Rye, and cast up and cleanse all your Draines to keepe your Lands dry all the Winter.

In October make an end of your wheate and Rye seed, and an end of winter rigging, scowze Ponds and Ditches, and carry your soyle to your Corne fields that are fallowed, set peares, plums, and apples, plant, plash or set any tree of quicke growth, remoue all sorts of Trees, especially all such as beare kirkells, and gather roots & seeds at pleasure.

In the beginning of November you may sow Wheate or Rye in all warme places, and doe any worke to be done in October, whether it be in the field, orchard, or garden, especially if the soyle be warme and of an hot temperature, now is the best time to prouide plough timber to roughen it and fashion it, and then lay it up to season, of which wood the Petro tree is the best, the Elmne next, and the Ash last. In this moneth take your cattle into the house, and for the whole yeare following be sure to make your Lenten prouision that you may haue it well fitted.

In December thrash out such corne as you may exchange for other household prouision, feede draynes, poultry, and whatsoeuer quicke foode is fit to be eaten in Christmas, kill swine, and bent away the profit of your Summer dayrie, keepe open your Draines to auoyd any inundation, and apply well either for profit or recreation the Art of fowling

Langley. 1636.

In all natures, for both Land and water are now abundant,
and the fowls soonest deceived.

Eclipses.

Foure times this yeare will the Two bright Lamps of Hea-
ven be Eclipsed, Two of the Sunne, and Two of the Moone,
wherof the first onely of the Moone will be apparent about our
Horizon: And that will fall or happen on the Tenth day of Fe-
bruary in the Evening. The beginning will be neare 3 quarters
of an houre after 9 of the clocke, the greatest obscurity and dark-
nesse will be towards 10 of the clocke, and the end neare 12 of
the clocke.

The cause of the Sunne Eclipsed.

THe Eclipse of the Sunne is nothing else, but the Interpo-
sition of the body of the Moone betwixt us and the Sun,
and the Sunne is never Eclipsed but at a new Moone, for then
the Moone is just underneath the Sunne, and the farther the
Moone goeth from the Sunne, the more the light encreaseeth,
yet the Sun is not Eclipsed every new Moone, the reason is
because she is sometimes on one side of the Sun, and sometimes
on the other, but when she happeneth just under the Sunne,
then doth she Eclipse the Suns light from us.

The cause of the Moone Eclipsed.

THe Eclipse of the Moone is nothing but the Interposition
of the body of the Earth betwixt us and the Sunne, for the
Moone her selfe, as also other little starres whatsoever, the
Sunne excepted, are darke and have no light of themselves, but
that the Sun doth shine on them continually, so making them
to cast a light, and the earth being betweene the Sun and the
Moone, shadoweth the light of the Sun from the Moone, cau-
sing her darkenesse: And further obserue that as the Sunne is
never Eclipsed but at a new Moone, so is the Moone never E-
clipsed but when she is just at the Full, for then she is farthest
off from the Sunne, and just over against him, but the Earth
is betwixt them.

A Prognostication. A short view of Astronomie, to give satisfaction to the Vulgar.

The World after Orontius, is defined to be a perfect & entire composition of all things, a Diuine worke, but finite, and continually to be maruailed at, adorned with all kindes of formes and shapes of bodies that nature could make, which in all parts are procreated and doe appere: And those first created by God (so well in Earth as in Heauen) by his only Word of nothing, to the end the same might be a proper mansion place for man, in which he might behold daily, and make knowne. Aristotle teacheth two diffinitions of the world, the one, that it is an apt frame wrought, consisting both of Heauen and Earth, and of the Celestiall and inferiour bodies aptly distributed, and of other naturall things in them contained. The other diffinition is, that the world is a perfect body, and most perfect, round forme, containing the Ordinance and distribution of bodies created by God, to tend vnto a purpose, which by and through God is preferred, and is diuided into two parts, viz. Ellementall, and Echeriall parts. The first is subiect to raply alterations, and containeth foure Elements, that is, Earth, Aire, Water, fire.

An Element is that whercof any thing is compounded and of it selfe not compounded: Of these foure Elements any part of any kinde is named for the whole, as any part of the earth is called the earth. The Echeriall parts both compasse the Elementall parts in the conceaulty thereof, and containeth 10 Sphæares, wherof the first Sphere, is the Sphere of the moone, and is next vnto vs, the second is Mercurius, the third Venus, the fourth the Sunne, the fifth Mars, the sixth Iupiter, the seuenth Saturne, the eighth sphere is the starry firmament, the ninth is the Christalline Heauen the tenth Primum mobile, or the first mouer which doth containe all the rest within it, and whatsoeuer is beyond or

[about

about that is the habitation of God and his Angells.

The reasons how the spheres were first found out, were there contrary motions in the heavens.

All things vpon the heavens turne about the Earth vpon the poles in 24 houres, and these motions are from the East into the West. And this we attribute to the motion of the 10 sphere or Primum mobile without staying being so appointed by God from the beginning, and carrieth about with him all the other spheres.

All the rest of the spheres haue contrary motions, every one in his kinde. And there motion is contrary from the West to the East and so are carryed about oftentimes by the first moouer before they make a perfect reuolution in themselves the Christalline or 9 sphere his motion is all most insensible, And is called the trembling motion and is performed in 49000 Yeeres.

The 8 sphere being the starry firmament performeth his motion in 7000 Yeeres.

The rest of the spheres are the 7 planets each sphere containeth in it but one starre whereof the vppermost and slowest is h which performeth his course in 30 yeeres the greatness of his body exceeding the earth 12 times.

V performeth his course through the Zodiacke in 12 yeeres his corpulency exceedeth the Earth 14 times.

J finisheth the tract of the Signifier in 2 yeeres and is lesse then the Earth 13 times.

The O maketh his period through the Zodiacke in 365 dayes 7 houres 49 minutes, the bignes of his body is greater then the Earth 140 times.

Q finisheth her course in a yeere and is lesse then the Earth 6 times.

P Endeth his reuolution in a yeere and is lesse then the earth 19 times.

The D dispatcheth her course in a moneth and is lesser then the Earth 41 times.

The

A Table by which you may finde the Tides in all those Havens that ioyne to it.

The Day agc.	Full Sea at Southampton. Quinborrow. Portsmouth. after Noone.		The Day agc.	Full Sea at Southampton. Quinborrow. Portsmouth. before Noone.		For these places, adde Houres and Minutes.
	Hour.	minu.		Hour.	minu.

Dover, Harwich, Yarmouth, 10 houres and 30 minutes.

Rye, Winchelsey, 15 minutes.

The

Al Prognostication.

The use of this Tide Table.

ARe you desirous to know full Sea in any of these Havens, you must then first find how old the moone is, then enter this Table with her age, and right against the age you may see the houre and minute of full Sea either at *Southampton*, *Quinborough*, or *Portsmouth*, but for the other places specified in the Table on the right hand, you must adde such houres and minutes to the former places, as you finde adjoyning to them, & the summe of such addition, is the time of full Sea there also. As for example, when it is full Sea at 8 of the clocke at night, at *Portsmouth* it is not full Sea at *Gravesend* untill one houre and 30 minutes after, and at *London* or *Hartlepoole* not till 3 houres after, and so of any of the other places.

England described in brieft.

England the mistresse of the Earth in respect of all things which she hath by Commerce from Forraigne Nations, as also in respect of those things which her owne Soyle by the providence of God produceth, and most especially embracing the true Church of God now flourishing in her bosome, and therefore may be termed (the Non Parcla of the world) and thus described, She is bordered on the North with Scotland. on the South with the brittish Sea, on the west with the Hybernian Ocean, being situate in the temperate Zone, & Eighth Clymate, watered with a multitude of Christall Streames, currents and Navigable Rivers, the bankes whereof are crowned with stony Meddowes, replenished with abundance of Cattle, and accosted with all manner of fertile fields, of all manner of Corne, and pulse, and graine, and besides all these affoordeth many other commodities and varieties for the vse of man.

This kingdome was at first Inhabited by some Colonies which did transplant themselves from the Neighbouring coasts of France, and lower Germany, as the affinity of their language,

language, policy, religion and manners doe vniquestionably proue being the offspring of Gomer of Iaphets progeny, as their owne appellation doth witness calling themselves Komery, who possessed and gouerned this land about 1100 Thousand yeares, about fifty yeares before the birth of our Lord and Saviour.

Then Iulius Caesar entred this Island which within one Hundred and fifty yeares after was subjugated by the Romans, vnder whose command they liued untill 430 yeares after Christ, And then the Roman great Emper. declining, they were forced to call home their Garrisons, and hauing before exhausted the strength of this Kingdome, left it a prey to the enemy: whereupon the Picts assaulted this land thus furnished, and weakened, they were compelled to craue the ayde of the Saxons, and the Angles, a warlike nation inhabiting neere the confines of Denmarke, who being arrived, chased away their enemies, and being allured with temperature, fertility, and pleasantness of the Countrey, growing in great numbers, expelled the Brittaines, or Komeroes that would not liue vnder their lawes and subiection. And so held it untill the yeare 1066. when William the Conqueror with his Normans subdued them, whose successors haue enjoyed to this present time.

It was anciently diuided by the Romans into 3 parts, Britanniam primam, from the South parts to Trent. Maximā Cessariensem, from thence Northward, and Britanniam Secundam which we call now Wales. After by the Saxons it was diuided into an Heptarchia, which at the last reduced to a Monarchy, was by Elfired into shieres, wapentakes, & tithings, with Iustices and Sherifes appointed for ministering of Justice, which partly confirmed and partly altered by William the Conqueror, was at last diuided into 39. Shieres of the English, with the addition of the 13 Shieres of Wales, in which are at this present two famous vniuersities, the Seminaries of vertue and learning, 26 Bishopricks

A Prognostication.

641 market Townes, 186 Castles, 972 parish Churches, 555 Rivers, 956 bridges, 13 Chales, 68 Forreſts, and 781 Parks, 985 faireſt markets. In January are 31, in February 34, in March 69, in Aprill 46, in May 16, in Iune 90, in Iuly 120, in Auguſt 102, in September 118, in October 91, in November 93, and in December 28. In it are Tribunals or Courts of Juſtice, temporall 9, viz. Parliament, Star-Chamber, Chauncery, Kings-Bench, Exchequer, Common-Pleas, Court of Wards, Admirallity, and Court of Requests, beſides Court Leete, and Court Baron, And 6 Spirituall, viz. Convocation, Synods, Audience, Arches, Prerogative, Faculties, and peculiar Jurifdictions. Branches of Nobility 9, that is Dukes, Marqueſes, Viſcounts, Barons, Baronets, Knights, Eſquiers, and Gentlemen, And of Inferiour branches or Commonallity 3 viz. Yeomen, Tradeſmen, & Husbandmen, &c.

The Battailles both by ſea and land ſince the Conqueſt fought by the Kings, Nobility, & Commons, againſt foraine invaſions, and domeſtique, and intestine wars 76, the laſt and moſt admirable, being in the Chace of the Spaniſh great Armado by them named invincible. An. Dom. 1588, wherein waſten leaders of ten Provinces, 72 Gallies, & Gallions, 47 Ships, & Hulkes, Eleuen Pinnaces, & Carvaks, 2843 great Ordnances, 9194 Saylorz, 18658 Souldiers, 1088 Gallies=ſlaves.

The delivrancees from Traytors and Traytors Plots very many, one to be remembred and never to bee forgotten, was the diſcovery of the Gunpowder Plot, in Anno, 1605. November the ſiſt by Papiſts intending to blow up, King, Queene, Prince, and State, and ſo bring ruine to the whole Land.

England is in Compaſſe 1570 odder Miles, and in Length 386 Miles, in Breadth 276. Kings that have ſwayed the Royall Scepter, being in all 2700 and odd Yeares.

Ireland

Langley. 1636.

Ireland is in Compasse 948 Myles, in Length from North to South 303 Myles. in Breadth from East to West One Hundred and Thirteene Myles.

The Isle of Man is in Circuit Ninety One myles, In Length Twenty Eight Myles, and in Breadth Eighteene Myles.

The Isle of Wight is about fifty Eight Myles, the Length Twenty Two Myles, and the Breadth mere Twelve Myles.

The Isle of Mona. or Anglesey in Wales, is in Circuit Eighty five Myles, in Length Twelve myles, and in Breadth Eighteene Myles.

*Let vertue Spring, and vice decay,
and God will turne his wrath away.*

*Repent thy Sinne, and Sinne no more,
then Corne and Cattle thou shalt haue store.*

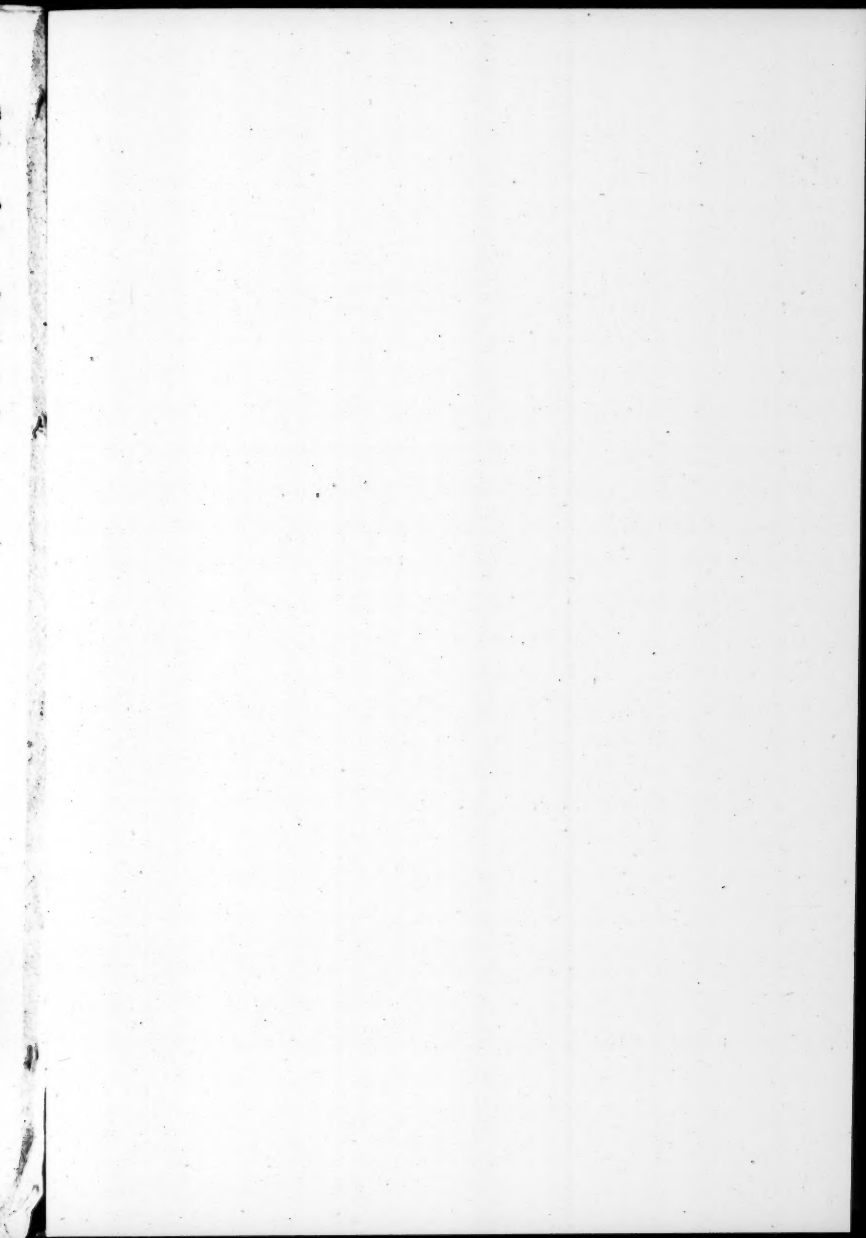

*Lay pride aside, and belly cheere,
and God will send a happy yeere.*

Soli Sapienti Deo sola Gloria.
